Building Dynamic Synapse Pipelines Using Metadata Tables

IN MULTIPLE ENVIRONMENT SETUP

By Ivanna Jurkiv Ditlevsen

Agenda

- About me
- Brief intro to Synapse pipelines
- Brief intro to multiple environments
- Use case on dynamic ingestion
- Use case on PowerBI refresh
- Takeaway and summary

About Me

- Data Engineer in Novo Nordisk Engineering
- *Based in Copenhagen, Denmark
- Azure DP-900 certified
- Azure DP-203 certified
- Tool stack includes Synapse Analytics Pipelines and Notebooks using PySpark
- Previously worked as Data Analyst and Product Owner of Data Management delivery team
- Alteryx and Tableau

Synapse Analytics Pipelines

- Pipelines are the lifeblood of data analytics solution
- Extract, transform and load data
- Orchestrate data pipelines
- A logical group of activities that together to perform a task

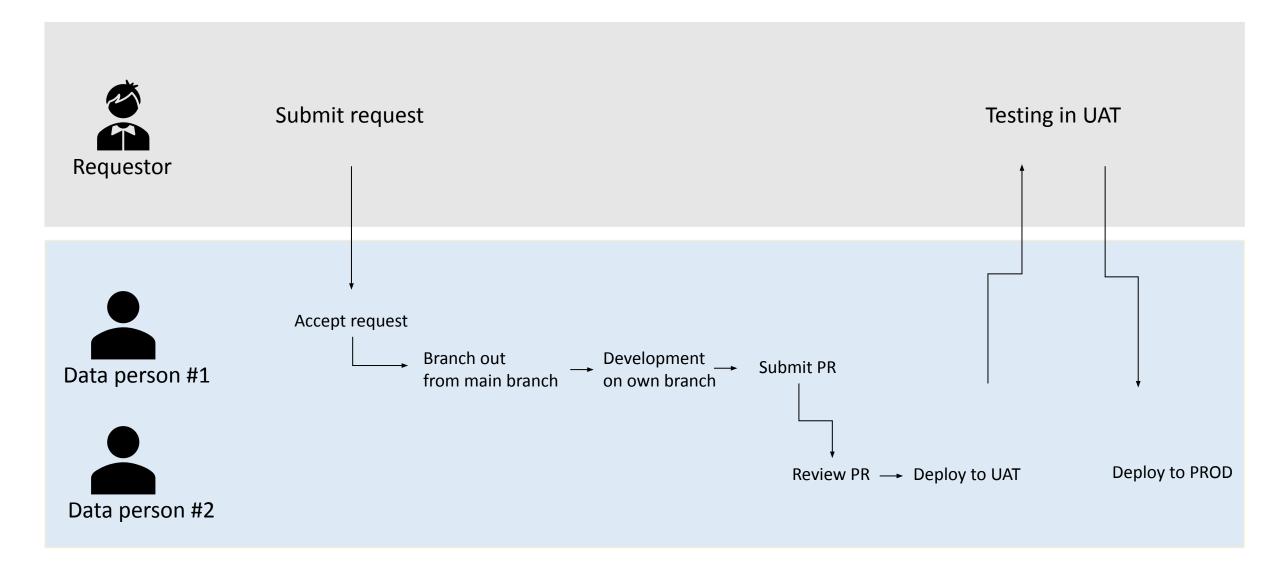

Multiple Environment Setup

Quality

Example- single environment setup

Example- multiple environment setup

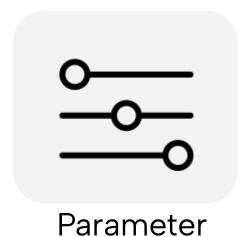

Use Case on Data Ingestion

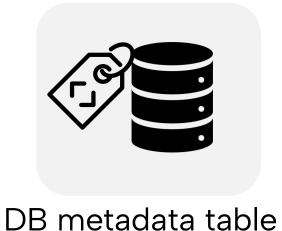

Request description

- Ingest [SalesLT].[Customer] and [SalesLT].[Address]
- More tables to be ingested in the future with short delivery time expected

Alternatives in Synapse Pipelines

Demo

Comparison

	Parameter	Table storage	Azure SQL db meta data table
Fast time-to-market in single env.	•	•	Ø
Fast time-to-market in multiple env.			
Ease of initial setup			
Ease of maintenance			

Other metadata that can be maintained

- Databases
- Schema
- Table
- Columns
- Frequency of ingest
-

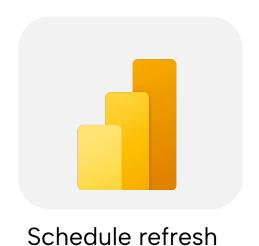

Use Case on Power BI Refresh

Request description

- Refresh PowerBI dataset from Synapse directly
- Multiple datasets to be built in the future with fast-time to market

Alternatives in PowerBl Refresh

In PowerBI

Automatic refresh In Synapse pipelines

Demo

Takeaway and summary

- Metadata tables can help to make pipelines more dynamic and future-proof
- Data requestors appreciate speed whereas developers appreciate bug-free deployments
